We got two samples. I expect to have the field team lead on the phone in the next 20 minutes to get the info.

They were delivered to the lab late last night, we requested a 24 hour turn. We'll have results from samples closer to the mine starting around noon today.

Craig,

Were you guys able to collect the two Region 6 background samples yesterday? If so could you share the pH readings and GPS for the two locations? Do you have a timeframe for analytical results for the samples.
